## **Accident Recorder**

### **Features:**

The Newly integrated system contains all the necessary elements and equipment to input, condition, format, record and transmit pertinent data and functions of a motor vehicle prior to and during its involvement in an accident or similar incident. The sensors are totally independent of the existing on-board computer system, thereby eliminating false or inaccurate data from being received from OEM installed equipment.

### **Functions:**

- Speed
- RPM's
- Brake application
- 3 axis vehicular movement (ie:front/rear, side to side, up&down)
- Brake light operation
- Turn signal operation
- Headlamp operation (High/low beams)
- Tail lamp operation
- Running lamp operation (Commercial vehicles)

### **Advantages & Benefits:**

- Will provide insurance companies with the opportunity to lower rates & provide proven safe driver benefits
- When innocent, will assist operators of motor vehicles to defend unwarranted criminal negligence allegations and costly traffic citations in court
- Totally independent sensors (Not connected to or dependent on OEM installed equipment)

---

### **Price:**

(Included in main base system)

**\*\*Accident Recorder is being offered and integrated into main system for commercial vehicles only at initial market release. Development is under way to offer feature for automobile market in near future.**
